

May 2000

All standard items of Planova Shop System A/S are available in the colours corresponding to the enclosed colour survey (unless anything else is indicated).

Surface and treatment of steel products.

All SHOP SYSTEM steel items are given the best possible surface treatment in order to ensure a beautiful and homogeneous looking product, impact strengthened and sturdy enough to cope with all known cleansers.

Having achieved the right shape, the metal items proceed to extremely modern surface treatment system. Here the parts are phosphatized for corrosion resistance and passed through our automatic powder coating plant to get an 80 micron layer of epoxy/polyester colour coat hardened by 200° C during 10 minutes.
