

SHELF MERCHANDISING

ROLLER TRACK™ GRAVITY FEED

RollerTrack™ drives profits by maximising category sales. It also minimises the time that needs to be spent re-merchandising and maintaining an attractive, sales boosting, product display.

RollerTrack™ highlights a category within the aisle and improves «shopability» - full range visibility facilitates consumer choice.

Easy shopping at any time!

RollerTrack™ is labour saving with major reduction in number of hours spent on re-merchandising and it also improves stock rotation. According to an independent study sales increased by up to 20% during peak trading hours. System pay-back is 6 to 9 months depending on application.

ROLLER TRACK™ GRAVITY FEED

RollerTrack™ is a shelf ready unit that can be installed directly on your shelves.

RollerTrack™ can be supplied as individual tracks, or as assembled sheets in any size. The assembled units are easy to transport and easy to mount. Two basic versions exist – with and without angle provider.

With angle provider, the unit is installed directly on flat shelving, creating a low angle gravity feed function. Without the angle provider, your existing inclinable brackets create the necessary angle.
